

Catppuccin

This template comes with two fonts!

- **Jellee**, the font we all know and love. Nothing really comes close to spelling Catppuccin quite like **Catppuccin** does! [\[source\]](#)
- **Nunito**, which is a nice, easy-to-read font. I personally feel that it suits the aesthetic well, while coming across as a perfectly usable font! [\[source\]](#)

Make sure that, if you want to use the fonts, you compile the document with `--font-path :`

```
$ typst compile --font-path "./fonts" main.typ
```

Enjoy this package! I will leave you with this display of the `palette` schema:

```
get-palette(theme) = (  
  name: "Mocha",  
  emoji: " ",  
  order: 3,  
  dark: true,  
  light: false,  
  colors: (  
    rosewater: (  
      name: "Rosewater",  
      order: 0,  
      hex: "#f5e0dc",  
      rgb: rgb("#f5e0dc"),  
      accent: true,  
    ),  
    flamingo: ("..."),  
    pink: ("..."),  
    mauve: ("..."),  
    red: ("..."),  
    maroon: ("..."),  
    peach: ("..."),  
    yellow: ("..."),  
    green: ("..."),  
    teal: ("..."),  
    sky: ("..."),  
    sapphire: ("..."),  
    blue: ("..."),  
    lavender: ("..."),  
    text: ("..."),  
    subtext1: ("..."),  
    subtext0: ("..."),  
    overlay2: ("..."),  
    overlay1: ("..."),  
    overlay0: ("..."),  
    surface2: ("..."),  
    surface1: ("..."),  
    surface0: ("..."),  
    base: ("..."),  
    mantle: ("..."),  
    crust: ("..."),  
  ),  
)
```
